

IMPORTANT ITEMS & TIPS

- **For increased/better coverage**, consider:
 - Use of Trend-Adjusted APHs, looking at all levels of coverage
 - Revenue Protection instead of Yield Protection
 - A higher level of coverage (before buying hail insurance)
 - Companion Production Plan (CPP) Hail/Fire Endorsement
 - Windstorm Coverage for Greensnap and Lodging on corn
 - Additional Fire Coverage (RP and farm policies may not cover)
- **Consider enterprise units** to make higher levels of coverage more affordable. Use this carefully! Must meet 20/20 Rule.
- **Be exact** in the acres (and share) you report! Match FSA or GPS.
- **Respond timely** to all requests for policy information, and know/understand all deadlines and dates concerning your policy/coverage.
- **Keep your agent informed** of changes to operation:
 - (Before) adding new land
 - Son/daughter starting farming
 - Marital status
- **Review your policy and schedule of insurance immediately!** Don't wait until loss time to alert us of problems. Avoid a MIF penalty!
- **Use Revenue Protection** to reduce the risks of (forward) marketing your crop and generate more revenue.
- **Must insure every acre of the crop** in the county in which you receive a share of the crop.
- **Coverage on Late Planted Crops** is automatically included.
- **Prevented Planted Coverage** is automatically included.
- **Social Security Numbers** needed for spouse, anyone with 10% interest in entity. Wrong or missing SS# could void or reduce coverage. Prenuptials are irrelevant. Spouse not needed if legally separated.
